

The Location:

Tonbridge School, Kent, England

The Requirement:

With expansive renovation work taking place at Tonbridge School, a large volume of heavy construction traffic was due on site including articulated lorries, cranes and piling rigs. The existing tarmac road needed protection to prevent cracks, breaks or accidents.

The Solution:

Ground-Guards surveyed the job and came up with a bespoke solution using MaxiTrack mats to create the perfect temporary access road around the side of the School. A total of 170 MaxiTrack mats were used, sat on a special protective underlay. The system was installed quickly and efficiently by the Ground-Guards' team. And with Ground-Guards' guarantee that MaxiTrack will not break by vehicles up to 130 tonnes, heavy construction traffic was utilised on site with complete confidence.

The Outcome:

A neat, tidy temporary roadway: strong, unbreakable and unmoveable.

The client took full advantage of Ground-Guards' new Buy Back Scheme, selling the mats back after the job was complete and generating a fantastic return on investment.
